

Prepare your public safety responders for emergencies

You can't predict when an emergency strikes, but you can be prepared.

Sudden cardiac arrest (SCA) can happen to anyone, anywhere. A victim's chance of survival dramatically decreases for every minute without treatment.¹

A nationwide study of law enforcement agencies proved first responder automated external defibrillator (AED) programs can reduce the time to defibrillation and increase a victim's chance of survival from out-of-hospital sudden cardiac arrests.²

As the first responder on scene, your team's access to clinically effective AEDs and high-quality CPR is vital for better patient outcomes. Arm your agency with emergency solutions from Stryker's system of care.

Help save more lives

LIFEPAK® 1000 AED

- See clearly with large, intuitive screen graphics and ECG display options
- Customize on-screen graphics or ECG display based on your team's needs
- Speed patient hand-off by connecting with other LIFEPAK electrodes and monitors

LUCAS® 3, V3.1 chest compression system*

- Deliver American Heart Association Guidelines-consistent, high-quality chest compressions
- Reduce responder fatigue with hands-free compressions
- Enhance team efficiency with ventilation alerts and data for post-event review

LIFEPAK CR2 AED

- Automatically analyze and detect if a shock is needed and continue chest compressions without pausing with cprINSIGHT® analysis technology
- Clearly understand instructions in loud environments with adjustable tones and voice prompts with ClearVoice™ technology
- Reduce energy and change CPR guidance for children using a designated child mode button

HeartSine® samaritan® PAD 350P/360P/450P AEDs

- Easily transport in tight spaces with a portable, compact design
- Receive easy-to-understand, guided visual and voice prompts throughout the entire resuscitation process
- Defend your device from water and dust with the highest level of protection (IP56)

LIFELINKcentral™ AED program manager

- Easily manage your AED program through remote monitoring
- Save time and resources by tracking AED status and supply expirations
- Receive email alerts when device readiness is compromised

A trusted legacy

Working in partnership with our customers, Stryker develops technologies and devices to give the public, first responders and hospitals more control during a critical event. Our uncompromising commitment to quality means product performance you can count on. Because in critical situations, you deserve the very best lifesaving tools.

Emergency Care

The information presented is intended to demonstrate Stryker's product offerings. Refer to operating instructions for complete directions for use indications, contraindications, warnings, cautions, and potential adverse events, before using any of Stryker's products. Products may not be available in all markets because product availability is subject to the regulatory and/or medical practices in individual markets. Please contact your representative if you have questions about the availability of Stryker's products in your area. Specifications subject to change without notice.

*Jolife recommends the LUCAS chest compression system is only used by persons with medical skills such as first responders, ambulance personnel, nurses, physicians or medical staff who have taken a CPR course according to the resuscitation guidelines (American Heart Association, European Council of Resuscitation or equivalent) and received training on LUCAS device use. The LUCAS device is for use as an adjunct to manual CPR when effective manual CPR is not possible, e.g. during patient transport, extended CPR, fatigue or insufficient personnel. The device requires routine maintenance checks to be ready; check the device and battery weekly and after each use according to the instructions for use. All operators must read the complete Instructions for Use before operating the LUCAS chest compression system. The LUCAS chest compression system can only be bought by or on the order of a licensed medical practitioner.

Stryker's AEDs require a prescription in the U.S. Please consult your physician. AED users should be trained in CPR and in the use of the AED. Although not everyone can be saved, studies show that early defibrillation can dramatically improve survival rates. AEDs are indicated for use on adults and children. AEDs may be used on children weighing less than 25 kg (55 lbs) but some models require separate defibrillation electrodes. A healthcare professional must always refer to the package insert, product label and/or instructions for use, including the instructions for cleaning and sterilization (if applicable), before using any Stryker product.
