

The all-in-one communication and security solution

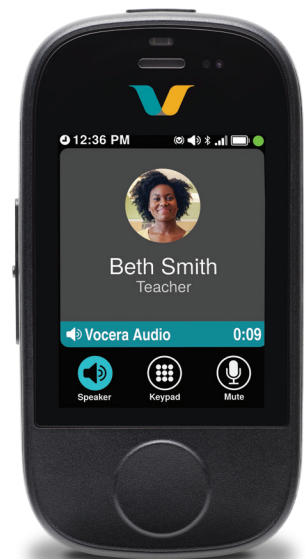

For everyday connections and emergencies

Communicate quickly and broadly – equip teachers, administrators, resource officers and security personnel

Go beyond walkie-talkies and panic buttons with the lightweight, wearable Smartbadge. It brings together voice calling, secure messaging and notifications all in one device.

Emergency communications

- Press the Smartbadge's panic button to reach security personnel quickly and discreetly.
- Broadcast to a group or everyone in a facility to follow a protocol such as lockdown or shelter in place.
- Teachers and staff can make a direct call to 911, and security supervisors can contact school resource officers directly.

Everyday communications

- Say, “Okay Vocera” to wake up the device and initiate a conversation without needing to know names or numbers.
- Use voice controlled workflows to call by name, role, or group.
- Enable administrators, teachers and school resource officers to stay connected from the classroom or elsewhere.
- Get a near-real time directory view of teachers, administrative staff and resource officers, even across multiple campuses.
- Integrate with additional technology, like security cameras, door access systems or building maintenance systems to send notifications to customized groups.
