Expertise at every phase

Building an ASC from the ground up is no simple task. But we can help make it feel simple. Just say where, and we're with you from there. In the last 30 years, we've helped to design and outfit over 15,000 operating rooms, and our broad product portfolio has the right equipment for every part of your ASC. We'll share our expertise every step of the way.

LET'S GET STARTED

Cutting-edge devices, **cutting-edge design**

Perhaps the best part of building an ASC from scratch is making everything just the way you've always known it should be. And with the HoloLens 2 mixed-reality design tool, it's easier than ever. It's not just better design, it can help you concentrate on better patient care.
